

MISTOP[®]

MOISTURE ELIMINATOR

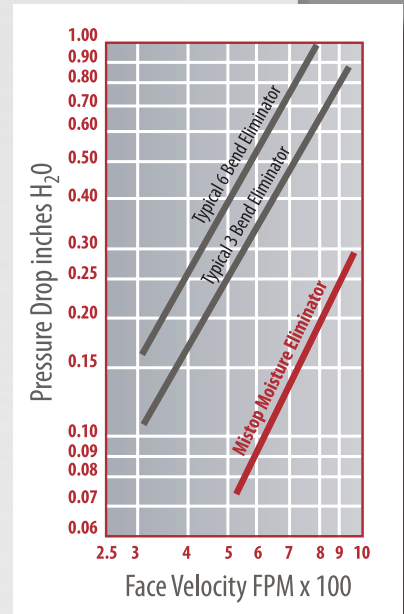

The efficient way to prevent water carryover and keep your indoor air healthier.

No other moisture removal system offers Mistop's combination of high performance and low air pressure drop. Our innovative design allows chilled air to move

freely through our specialized mesh, without an increase in fan horsepower. Plus, the slim profile generally requires no complicated retrofitting. From installation to operation, you'll see efficiency and savings. No wonder we're the ones that air-handler manufacturers prefer.

- removes 99% of water droplets at 500 FPM, with pressure drop no greater than 0.1"
- conforms to ASHRAE standard 62-2001: Ventilation for Acceptable Indoor Air Quality
- compact design installs with as little as 2" clearance, allows full access to drain pan
- custom manufactured to fit any vertically mounted cooling coil in new or existing factory-built or site-erected HVAC system
- type 304 stainless steel construction withstands harshest environments, requires minimal maintenance
- bracket mounts for easy installation, easy removal for cleaning as needed
- saves money with lower initial cost, lower install cost, lower operating cost than traditional three-bend systems

APPLICATIONS

- high percentage outside air systems
- IAQ improvement projects
- HVAC renovations
- custom air handlers
- maximizing existing cooling capacity
- addressing warm and humid conditions
